

2021 and 2022 Lake Owen Yellow Iris Mitigation Efforts

In 2021, herbicide was applied at sites circled in **red**. It was brushed on using a sponge/tong method to eliminate negatively impacting non-target plants. Manual removal occurred at the site circled in **yellow**. The other two sites were not managed due to lack of permission and lack of yellow iris upon follow up.

Yellow iris was not found in 2022 at the 2021 herbicide treatment sites. Five new sites were treated in 2022.
